1. Summary of TA Feedback and Revisions

Performed by: Trần Huỳnh Mạnh Đạt | Reviewed by: Đào Duy Anh | Edited by: Trần Huỳnh Mạnh Đạt

Feedback ID	TA feedback	Affected document	Revision made	Status
TA-01	Tasks in each sprint need to be described in greater detail.	Software Development Plan	Expanded every sprint into smaller, assignable, estimable, and verifiable tasks. Added owners, priorities, dependencies, estimates, acceptance criteria, deliverables, and Trello references.	Completed
TA-02	The AI Audit Report needs more detail.	AI Usage Report	Added an AI-use declaration, tool information, a detailed usage log, prompt purposes, generated outputs, human verification, corrections, affected artifacts, and audit evidence.	Completed
TA-03	The document format should be more polished and readable.	All revised documents	Standardized headings, contribution lines, tables, spacing, terminology, diagrams, captions, cross-references, and Markdown-to-PDF formatting.	Completed

Revision Principles

- Every change must identify the affected document and section.
- Descriptions must explain what changed, not only state that a section was updated.
- New claims must be traceable to a requirement, Trello issue, meeting record, prototype, commit, or other project evidence.
- Placeholder text must be replaced before the final submission.
- The Markdown and PDF versions of the same document must contain equivalent information.

2. Revised Software Development Plan

Performed by: Trần Huỳnh Mạnh Đạt | Reviewed by: Đào Duy Anh | Edited by: Trần Huỳnh Mạnh Đạt

2.1 Revision Overview

Change ID	PA2 issue	PA3 revision	Updated section	Verification evidence
SDP-01	Sprint tasks were too broad and difficult to assign.	Divided each feature into analysis, design, frontend, backend, database, integration, testing, documentation, and review tasks where applicable.	Sprint Plan / Work Breakdown Structure	Trello backlog and sprint board
SDP-02	Tasks did not clearly state who was responsible.	Added an owner or assignee to every task.	Sprint Plan	Trello assignee field
SDP-03	Task duration and effort were unclear.	Added story points or estimated hours and expected start/end dates.	Schedule and Sprint Plan	Trello estimates and project schedule
SDP-04	Completion conditions were not measurable.	Added a deliverable and acceptance criteria to every task.	Sprint Task Details	Pull requests, screenshots, test results, or documents
SDP-05	Dependencies between tasks were missing.	Added task dependencies and identified blocking relationships.	Sprint Task Details	Trello issue links and dependency column
SDP-06	Sprint objectives were not explicit.	Added a sprint goal, expected increment, milestone, and exit criteria for every sprint.	Sprint Overview	Sprint Review record
SDP-07	Progress tracking was difficult to verify.	Added Trello issue IDs, task statuses, and links to related commits or artifacts.	Sprint Task Details	Trello screenshots and Git log
SDP-08	The plan's presentation was inconsistent.	Standardized headings, tables, terminology, spacing, and contribution information.	Entire document	Markdown and exported PDF review
SDP-09	Team membership changed during PA3.	Added a team membership update stating that Tô Trần Hoàng Triệu was removed from the active project group because of non-contribution, repeated missed deadlines, and work quality that caused rework for other members. Future planned tasks were reassigned to active members.	Scrum Organization / Sprint Backlogs	Team review and updated SDP task table

2.2 Detailed Sprint Structure

Each sprint in the revised plan uses the following structure:

Sprint [NUMBER] - [SPRINT NAME]

Sprint duration: [START DATE] to [END DATE]

Sprint goal: [CLEAR AND MEASURABLE GOAL]

Functional scope: [FEATURES OR USE-CASE IDS]

Expected increment: [DEMONSTRABLE PRODUCT INCREMENT]

Sprint owner: [NAME]
Definition of Done: [SPRINT-LEVEL COMPLETION CONDITIONS]

Sprint Task Backlog

Task ID	Requirements / UC	Detailed task	Owner	Reviewer	Estimate	Dependency	Acceptance	Statu
S[NO]-T01	[US/UC ID]	[Specific analysis or clarification task]	Analysis	[NAME]	High	[POINTS/HOURS]	None	None
S[NO]-T02	[US/UC ID]	[Specific UI/UX task]	Design	[NAME]	High	[POINTS/HOURS]	S[NO]-T01	None
S[NO]-T03	[US/UC ID]	[Specific database task]	Database	[NAME]	High	[POINTS/HOURS]	S[NO]-T01	None
S[NO]-T04	[US/UC ID]	[Specific API or business-logic task]	Backend	[NAME]	High	[POINTS/HOURS]	S[NO]-T03	None
S[NO]-T05	[US/UC ID]	[Specific interface task]	Frontend	[NAME]	High	[POINTS/HOURS]	S[NO]-T02, S[NO]-T04	None
S[NO]-T06	[US/UC ID]	[Specific integration task]	Integration	[NAME]	Medium	[POINTS/HOURS]	S[NO]-T04, S[NO]-T05	None
S[NO]-T07	[US/UC ID]	[Specific test task]	Testing	[NAME]	High	[POINTS/HOURS]	S[NO]-T06	None
S[NO]-T08	[US/UC ID]	[Specific documentation and review task]	Documentation	[NAME]	Medium	[POINTS/HOURS]	S[NO]-T07	None

2.3 Example of a More Detailed Task

Before PA3

Task	Assignee	Status
Implement invoice management	[NAME]	To do

After Revision

Task ID	Requirement / UC	Detailed task	Owner	Reviewer	Estimate	Dependency	Acceptance criteria	Status
S2-DOC-01	PA2	Audit PA2 requirements against the Vision Document and SDP.	Đạt	Duy Anh	5h	PA2 rubric	Compliance checklist is complete.	Completed

2.4 New Task-Level Information

The PA3 version adds information that was not consistently present in the PA2 later-sprint plan:

- Requirement, feature, or use-case references.
- A specific task description instead of a broad feature name.
- One owner and one independent reviewer.
- Estimated effort in hours.
- Dependencies between tasks.
- Acceptance criteria.
- Task status such as `Completed`, `In Progress`, or `Planned`.
- Evidence through Trello, commits, tests, screenshots, documents, or demonstrations.

Example of the revised task style:

PA2-style task	PA3 detailed tasks
Complete maintenance assignment and Maintenance Staff workspace.	Implement manager assignment, implement Maintenance Staff status updates, implement repair-result and image-evidence endpoints, implement the Maintenance Staff workspace, integrate the workflow, and test authorization and status transitions.

2.5 Scope and Role Changes

The PA3 version introduces the following scope changes:

- The Floor Manager role is removed.
- Floor-related duties are reassigned to the Dormitory Manager.
- `FR08 - Back up and restore data` is removed from the current user-facing scope.
- `FR19 - Inspect assets` is removed as a standalone use case.
- `FR24 - Generate revenue reports` remains a planned capability.
- The functional scope is mapped to actors, requirements, student features, and maintenance-staff features.

3. Revised Vision Document

Performed by: Trần Huỳnh Mạnh Đạt | **Reviewed by:** Đào Duy Anh | **Edited by:** Trần Huỳnh Mạnh Đạt

This section records only the visual and presentation improvements made to `PA3/VD_v1.1.md`.

Change ID	Appearance improvement	Result
VIS-APP-01	Replaced the loose bold metadata block with a clean front-matter table.	The first page now looks more structured and professional.
VIS-APP-02	Added a compact Vision Snapshot near the top of the document.	Reviewers can understand the product, audience, PA3 focus, and evidence before reading the full document.
VIS-APP-03	Added a Table of Contents with direct links to all major sections.	The document is easier to navigate in Markdown and PDF form.
VIS-APP-04	Standardized the heading hierarchy so the document has one H1 and consistent H2/H3 sections.	The rendered outline is cleaner and less visually noisy.
VIS-APP-05	Converted repeated performer, reviewer, and editor lines into lighter blockquote styling.	Required contribution information remains visible without overpowering the content.

VIS-APP-06	Standardized Markdown table separators, column names, spacing, and repository links.	Tables render more cleanly and are easier to compare.
VIS-APP-07	Added a Feature Status Summary before the detailed F-01 to F-10 feature descriptions.	Long feature content becomes easier to scan.
VIS-APP-08	Updated old labels, role notes, footer version, and spelling consistency.	The Vision Document looks like a polished PA3 revision instead of an unfinished PA2 draft.

4. Revised AI Usage Report

Performed by: Trần Huỳnh Mạnh Đạt | **Reviewed by:** Đào Duy Anh | **Edited by:** Trần Huỳnh Mạnh Đạt

Files:

- documents/AIUsageReport.md
- documents/AIUsageReport.pdf

4.1 Revision Overview

Change ID	PA2 issue	PA3 revision	Updated section	Verification evidence
AI-01	The report did not clearly declare whether AI was used.	Added an explicit AI-use declaration and identified the sprint covered by the report.	AI Usage Declaration	Signed team confirmation
AI-02	AI tools were named without enough context.	Added tool name, model or version when known, user, date, and purpose.	Tools and Usage Scope	Tool records
AI-03	Prompts and outputs were not traceable to project work.	Added a unique usage ID, related Trello issue, affected artifact, prompt purpose, output summary, and link to evidence.	Detailed AI Usage Log	Trello, commits, and document history
AI-04	Human review was unclear.	Added the reviewer, verification method, corrections made, and final acceptance or rejection decision for every material AI output.	Human Verification	Review notes and commits
AI-05	Incorrect or unused AI output was not documented.	Added rejected outputs, identified problems, and corrective actions.	Rejected or Corrected Outputs	Correction log
AI-06	Privacy and academic-integrity controls were missing.	Added rules for confidential data, credentials, copyrighted content, attribution, and human responsibility.	Risk and Compliance Review	Team review checklist
AI-07	The audit trail was difficult to inspect.	Added consistent tables, evidence references, summaries by member/tool, and contribution lines.	Entire report	Markdown and PDF review

4.2 Required AI Usage Log Structure

The revised AI Usage Report records each material use of AI using two compact records. Splitting the log this way keeps the report readable in both Markdown and PDF.

AI usage record

Usage ID	Date	Team member	AI tool / model	Related task or Trello ID	Final decision
AI-[NO]	[DATE]	[NAME]	[TOOL/MODEL]	[TASK/TRELLO-ID]	Accepted / Modified / Rejected

Purpose, verification, and evidence

Usage ID	Purpose and prompt summary	Output used	Human verification	Corrections made	Affected artifact	Evidence
AI-[NO]	[WHY AI WAS USED AND WHAT WAS REQUESTED]	[SUMMARY OF OUTPUT]	[HOW ACCURACY AND QUALITY WERE CHECKED]	[CHANGES MADE BY THE TEAM]	[FILE/SECTION/COMMIT]	[LINK/PATH/SCREENSHOT]

4.3 AI Output Verification Categories

Every AI-assisted result must record at least one applicable verification method:

- Compared with the approved Vision Document or use-case specification.
- Executed and tested locally.
- Reviewed through a pull request or peer review.
- Checked against official technical documentation.
- Validated using test cases and expected outputs.
- Compared with the database schema or API contract.
- Proofread for factual, grammatical, and formatting errors.
- Rejected because the output was incorrect, incomplete, insecure, or outside the project scope.

4.4 AI Usage Summary

Team member	Tool	Number of recorded uses	Main purposes	Accepted	Modified	Rejected
[NAME]	[TOOL]	[COUNT]	[PURPOSES]	[COUNT]	[COUNT]	[COUNT]
Total	-	[COUNT]	-	[COUNT]	[COUNT]	[COUNT]

4.5 AI Risk and Compliance Additions

- No password, API key, access token, private key, or production credential is included in an AI prompt.
- Personally identifiable student data is removed or anonymized before AI use.
- AI-generated code is reviewed for security, authorization, validation, and error handling.
- AI-generated text is checked against the actual project scope and implementation.
- AI-generated diagrams and specifications are reviewed for consistency with the Vision Document.
- Team members remain responsible for every submitted artifact, including AI-assisted content.

5. Global Formatting and Presentation Improvements

Performed by: Trần Huỳnh Mạnh Đạt | **Reviewed by:** Đào Duy Anh | **Edited by:** Trần Huỳnh Mạnh Đạt

The following presentation improvements were applied consistently across the revised documents.

Change ID	Formatting issue	Improvement	Applied to
FMT-01	Heading styles and numbering were inconsistent.	Applied a consistent numbered heading hierarchy and descriptive section titles.	All reports
FMT-02	Contributor information was missing or placed inconsistently.	Added Performed by , Reviewed by , and Edited by immediately after each main section header.	All reports
FMT-03	Long paragraphs were difficult to scan.	Converted suitable content into concise paragraphs, bullet lists, and structured tables.	All reports
FMT-04	Terminology varied between documents.	Standardized actor names, module names, requirement IDs, use-case IDs, and status labels.	Vision, SDP, Use-Case Model, specifications
FMT-05	Tables were difficult to compare.	Added consistent column names, alignment, IDs, and short evidence-oriented descriptions.	All reports
FMT-06	Diagrams lacked consistent presentation.	Standardized Mermaid syntax, diagram titles, actor labels, boundaries, and relationship notation.	Documents containing diagrams
FMT-07	Figures and prototypes were difficult to reference.	Added figure numbers, captions, and references from the relevant text or use-case specification.	Use-Case Specifications
FMT-08	Markdown and PDF output could differ visually.	Reviewed page breaks, table width, diagram scaling, spacing, and readability after PDF conversion.	All Markdown/PDF document pairs
FMT-09	Navigation was limited.	Added a table of contents or clear section hierarchy where appropriate.	Long reports
FMT-10	File navigation was unclear.	Standardized filenames and linked deliverables from README.md .	Submission package

Formatting Verification Checklist

- ☐ Heading levels are sequential and consistent.
- ☐ Each main section includes performer, reviewer, and editor information on the first line after its header.
- ☐ Tables render correctly in both Markdown and PDF.
- ☐ Mermaid diagrams render without syntax errors.
- ☐ Figures and prototype screenshots have captions.
- ☐ Requirement IDs and use-case IDs are consistent across documents.
- ☐ No obsolete role, feature, date, or placeholder remains.
- ☐ No table, diagram, or image is clipped in the PDF.
- ☐ Page breaks do not separate a heading from its first paragraph or table.
- ☐ English wording has been proofread for clarity and consistency.

6. Consolidated Change Traceability Matrix

Performed by: Trần Huỳnh Mạnh Đạt | **Reviewed by:** Đào Duy Anh | **Edited by:** Trần Huỳnh Mạnh Đạt

Use this table to provide direct evidence that every declared change was applied.

Change ID	Document	Updated section	Related TA feedback	Responsible member	Review status	Evidence or location
SDP-01 to SDP-09	Software Development Plan	Sprint Plan, Schedule, Task Details, Scrum Organization, team membership update	TA-01, TA-03	[NAME]	Reviewed	[FILE SECTION/TRELLO/LINK]
VIS-APP-01 to VIS-APP-08	Vision Document	Appearance, formatting, navigation, table styling, feature scanning, and visual polish	TA-03	Trần Huỳnh Mạnh Đạt	Reviewed	PA3/VD_v1.1.md
AI-01 to AI-07	AI Usage Report	Declaration, Usage Log, Verification, Compliance	TA-02, TA-03	[NAME]	Reviewed	[FILE SECTION/LINK]
FMT-01 to FMT-10	All revised documents	Entire documents	TA-03	[NAME]	Reviewed	[FILES/PDF REVIEW]

7. Final Submission Verification

Performed by: Trần Huỳnh Mạnh Đạt | **Reviewed by:** Đào Duy Anh | **Edited by:** Trần Huỳnh Mạnh Đạt

Document completeness

- ☐ This is the only `Changes.md` file in the PA3 submission package.
- ☐ Every document revised after PA2 has its own section in this file.
- ☐ Every declared change is present in the corresponding document.
- ☐ Updated schedules, roles, requirements, and document names are consistent.

Sprint and AI audit quality

- ☐ Sprint tasks are detailed, assignable, estimable, and verifiable.
- ☐ Each sprint includes a goal, expected increment, task breakdown, and completion criteria.
- ☐ The AI Usage Report contains a detailed log of every material AI use.
- ☐ Human verification and corrections are documented for AI-assisted outputs.

Presentation and final review

- ☐ Formatting improvements are visible in both Markdown and PDF.
- ☐ All remaining placeholders in square brackets have been replaced.
- ☐ Contributor information is correct in every section.
- ☐ The final change log has been reviewed against the TA feedback and PA3 requirements.
